

## **Increase your productivity and profitability with a Terberg Kinglifter Truck Mounted Forklift**

Terberg Kinglifter manufactures a wide range of truck-mounted forklifts, suitable for a variety of applications, including beverage distribution, Agricultural products, building materials, gas cylinder distribution, defence and recycling.

Truck Mounted Forklifts provide the solution to many logistical challenges. They provide the ability to load and unload at sites without onsite handling equipment, enabling a fast, safe and cost-effective schedule and their design ensures that no load space is lost. Terberg has also guaranteed that mounting and un-mounting of the forklift is just as quick and easy by providing controls on the side of the machine, removing the need for the operator to be in the seat, as well as locating the fuel filler and level on the rear.

To project the right corporate image your truck mounted forklift needs to continue looking good for a long time. For this reason, Terberg gives special attention to excellent corrosion protection. The frame, mast and other steel components receive a cataphoretic primer followed by powder coating. The panels are made of stainless steel. The wheel arms, which always suffer damage during operations, are hot dip galvanised.

All Terberg's high-quality units have a very favourable payload compared with their own weight and come with a Yanmar diesel Stage V engine ensuring greater fuel efficiency. Each Kinglifter is configured specifically for the customer. The modular system, with standard models and many options, means that the machine is perfectly tailored to the way you work.
